 - (viii) This sentence is always true and therefore, it is a statement.
 - (ix) It is not clear from the context which day is referred and therefore, it is not a statement.
 - (x) This is a true statement because all real numbers can be written in the form $a + i \times 0$.
2. The three examples can be:
 - (i) Everyone in this room is bold. This is not a statement because from the context it is not clear which room is referred here and the term bold is not precisely defined.
 - (ii) She is an engineering student. This is also not a statement because who 'she' is.
 - (iii) " $\cos^2 \theta$ is always greater than $1/2$ ". Unless, we know what θ is, we cannot say whether the sentence is true or not.

 The sand does not cool down fast at night.
- (iv) “And”. The component statements are:
 $x = 2$ is a root of the equation $3x^2 - x - 10 = 0$
 $x = 3$ is a root of the equation $3x^2 - x - 10 = 0$
2. (i) “There exists”. The negation is
 There does not exist a number which is equal to its square.
- (ii) “For every”. The negation is
 There exists a real number x such that x is not less than $x + 1$.
- (iii) “There exists”. The negation is
 There exists a state in India which does not have a capital.

3. No. The negation of the statement in (i) is “There exists real number x and y for which $x + y \neq y + x$ ”, instead of the statement given in (ii).
4. (i) Exclusive
 (ii) Inclusive
 (iii) Exclusive

EXERCISE 14.4

1. (i) A natural number is odd implies that its square is odd.
 (ii) A natural number is odd only if its square is odd.
 (iii) For a natural number to be odd it is necessary that its square is odd.
 (iv) For the square of a natural number to be odd, it is sufficient that the number is odd
 (v) If the square of a natural number is not odd, then the natural number is not odd.
2. (i) The contrapositive is
 If a number x is not odd, then x is not a prime number.
 The converse is
 If a number x is odd, then it is a prime number.
- (ii) The contrapositive is
